To,
Hiring Manager
Wilfrid Laurier University,
Lazaridis School of Business & Economics

My name is Aditi Patade, a graduate student enrolled at University of Waterloo for Master of Engineering in Electrical and Computer Engineering Department. I am planning to specialize in Software Engineering. I am reaching out to express my interest in the position of Software Application Developer at Wilfrid Laurier University- Lazaridis School of Business & Economics.

Before starting my masters, I was working at a startup named Inquizity Metonia OPC PVT Ltd, Mumbai, India as an Application Developer starting from May 2018 to October 2019. In this role, I was involved in

- Gathering user requirements by understanding the business flow of a particular customer in order to digitize business processes into a centralized digital system.
- Other than interacting with the customer while collecting the requirements, I used to design the UI/UX for the applications, present the prepared UI to the customer and freeze the requirements by modifying the wireframe based on user feedback.
- After freezing the user requirements, I used to develop the frontend and create the applications. Also, I used to design and create the database for these applications using Microsoft SQL server. While working with frontend, I have developed applications in Angular JS, Ionic 2, HTML 5, CSS 3 and Bootstrap.
- After 6 months on development in the above technology, the company decided to move to an advanced technology like Angular 7 (Typescript) and Ionic 4.

Additional to my experience in developing software, I have completed my Bachelor's degree in Biomedical Engineering in 2018. Due to my interest in coding and designing, I enrolled myself in Android application Development (Online Certified Course) which, I believe, helped me set my foot in software industry.

Working in a startup culture has given me a freedom to not only learn new things but also to implement them within different projects, thus instilling the value of hard-work, ownership and self- sustainability with a sense of responsibility and accountability. I am aware that, if required, I need to learn new skills in order to develop the applications; being a self- learner, I am sure I can develop that skill within a couple of weeks.

Thank you for this opportunity, and I look forward to speaking with you about this exciting opportunity.

Best Regards,
Aditi Patade
